

XIV ISR Summer Seminar

July 14-16, 2023

Genoa, Italy

REGISTRATION

EARLY BIRD before April 14th, 2023:

- EUR 485 for ISR members
- EUR 585 for non-members

EASTER April 15th to May 30th, 2023:

- EUR 580 for ISR members
- EUR 680 for non-members

After May 30th, 2023:

- EUR 650 for ISR members
- EUR 750 for non-members

The registration fee includes:
Seminars' fee, three lunches, water, and
coffee during breaks mornings and
afternoons

For more information send a message to
isr.generalsecretary@gmail.com

Send your completed registration
(attached) to treasurer.isr@hogrefe.ch

The registration fee is payable by
means of EUROCARD/MasterCard , Visa,
Pay Pal or Bank Transfer.

Meet The Faculty

Joni Mihura

"Charles Manson's 1997
Evaluation: The Rorschach in a
Multimethod Approach to Assess
for Schizophrenia"

Maria Fiorella Gazale

"Efficacy of the Rorschach test in the
diagnosis of psychosis by assessing
the quality of perception and thought
disorders. Comparison of results with
different normative samples through
the use of the CHESSES-2. Analysis of
clinical cases according to J.Kleiger's
integrated model in the analysis of
Special Phenomena and according to
the minisequence analysis model".

Ali Khadivi

"Current perspectives in
Assessment of Psychosis"

RORSCHACH AND PSYCHOSIS

results. In contrast to Rorschach records from psychopaths that can be rather flat, Manson's grandiose flair and need for uniqueness to sustain the media and public's attention results in extremely unique Rorschach responses. Due to the longstanding debate as to whether Charles Manson qualified for a diagnosis of schizophrenia, and the strong meta-analytic support for assessing psychosis with the Rorschach, Mihura used the R-PAS results to answer that question.

Roy's original CS interpretations and Mihura's R-PAS interpretations will be compared, but the R-PAS results will be interpreted more in-depth. Because a video or transcription of the 1997 clinical interview was not available, Mihura reviewed two online interviews with Manson (one at the trial, another in 1993 with Diane Sawyer) to further evaluate his speech for what had been referred to in his record as thought disorder or schizophrenic speech. Videoclips of the interview will be shown. Then Mihura will evaluate the key schizophrenia dimensions using the test data.

Joni Mihura

"Charles Manson's 1997 Evaluation: The Rorschach in a Multimethod Approach to Assess for Schizophrenia"

Joni L. Mihura, Ph.D., ABAP is a professor at the University of Toledo specializing in assessment, psychosis, and test validity meta-analyses. She is a co-developer of the Rorschach Performance Assessment System (R-PAS) and previously served on John Exner's Research Council.

After Charles Manson's death in 2017, the results from his last psychological evaluation in 1997 became available to the public. To date, no other MMPI or Rorschach results from Charles Manson are known to exist. Two MMPI-2 experts and Joni L. Mihura, as an R-PAS expert, was invited to provide a contemporary interpretation of Manson's test
